

MeetSense AI Report

Executive Summary

Project planning meeting to finalize timeline for the AI meeting and diligent system. I recommend using open AI whisper because it provides accurate transcription and works well even with the background noise. I will start working on the backend APIs that will process the transcript and communicate with the AI models. The streamlit application is responsive and easy to use. Please keep the interface simple because our target users are business professionals. We should also include an action item extractor that automatically identifies assigned task, responsible team members and deadlines. I will finalize the dashboard designed by Thursday and share it with the team for feedback. I will also perform testing on different meeting records to verify the transcription accuracy and ensure the summaries are meaningful. If everything goes according to plan, we should be ready for the client demonstration next Tuesday.

Sentiment

POSITIVE (99.94%)

Productivity Score

90/100

Action Items

- Our objective is to finalize the timeline for the AI meeting and diligent system and assigned responsibilities for the first development sprint.
- Good morning, I have completed the initial research on the speech recognition models.
- I will start working on the backend APIs that will process the transcript and communicate with the AI models.
- I expect to finish the API development by next Monday.
- From the design perspective, I have prepared a few dashboard wireframes.
- The dashboard will display the meeting transcript, AI generated summary, action items, sentiment analysis and productivity score in a clean and user friendly layout.
- Excellent, we also need to make sure that the streamlit application is responsive and easy to use.
- This feature will help user quickly understand the importance discussion points without reading the complete transcript.
- We should also include an action item extractor that automatically identifies assigned task, responsible team members and deadlines that will improve productivity and reduce manual note-taking.
- Our deadline for completing the first prototype is next Friday before that everyone should push their latest code to the GitHub and update the project documentation.
- I will also perform testing on different meeting records to verify the transcription accuracy and ensure the summaries are meaningful.

- If everything goes according to plan, we should be ready for the client demonstration next Tuesday.
- I will finalize the dashboard designed by Thursday and share it with the team for feedback.
